

1. Walk me through your resume.

Follow-up Questions:

- Which section of your resume are you most confident about?
 - What is your biggest achievement?
 - Why did you choose these technologies?
-

2. Tell me about your final year/project.

Follow-up Questions:

- What problem does your project solve?
 - What was your role?
 - Why did you choose this project?
-

3. Explain your project architecture.

Follow-up Questions:

- Explain the project flow.
 - What is the frontend, backend, and database?
 - How does data move through your application?
-

4. What challenges did you face during the project?

Follow-up Questions:

- How did you solve them?
 - What was the most difficult bug?
 - What did you learn from those challenges?
-

5. If your project has 10,000 users, what problems might occur?

Follow-up Questions:

- How would you improve performance?
- How would you reduce database load?

- How would you handle concurrent users?
-

6. If you were given another month, what improvements would you make?

Follow-up Questions:

- Which feature would you add first?
 - How would you improve security?
 - How would you improve scalability?
-

7. Explain the database design of your project.

Follow-up Questions:

- How many tables are there?
 - Why did you create those relationships?
 - Which table is the most important?
-

8. Which API did you use in your project?

Follow-up Questions:

- What is REST API?
 - Which HTTP methods did you use?
 - How did you test your APIs?
-

9. What did you learn from this project?

Follow-up Questions:

- Which technical skills improved?
 - Which soft skills improved?
 - What would you do differently if you started again?
-

10. Scenario-Based Question

Imagine your project crashes during the client demonstration.

Questions:

- What would you do first?
- How would you communicate with the client?
- How would you identify the root cause?
- What preventive measures would you take to avoid similar issues in the future?
